

## Agile Project Management

While not a silver bullet, Agile project management methods can yield faster time-to-market, lower project costs and reduced product defects. This is why, according to a recent study, 69% of organizations are adopting Agile in some form. To assist managers and practitioners in their quest to integrate this powerful approach into their projects, TwentyEighty Strategy Execution has released a new Agile training curriculum focused on building practical skills and competencies in this discipline.

### Available Courses:

#### Agile Overview for Executives and Leaders

This course is for executives and leaders. It speaks to functions and responsibilities specifically related to Agile implementation, and provides an overview of the main concepts associated with Agile, Lean and Scrum in the leadership capacity and delivers a strategic view of how to convert your organization to high performance.

#### Agile Practices for Product Owners

This course will discuss the business value of using Agile and the need to collaborate with IT. The course also addresses who the product owner is, how to be effective in that role, and what that role entails as well as what the new expectations will be.

#### Agile Projects: Keys to Getting Started

*Agile Projects: Keys to Getting Started* gives participants the opportunity to select a project for Agile development; determine the readiness of the organization, team, customer and project manager; and work through the life cycle of an Agile project.

#### Delivering Agile Projects with Scrum

This course is intended for every member of a project team and is designed to teach individuals how to implement Agile and Scrum. Real world examples and techniques that dozens of teams from organizations of all sizes have used will be reviewed and discussed.

#### Developing Agile Requirements

This course focuses on the process of requirements gathering in an Agile environment as well as providing the tools and techniques to record, collect and organize critical information. Learn to understand how to differentiate the levels of requirements and how to gather the right level at the right time.

#### Estimating and Planning Agile Projects

This course is designed to give students a more complete and in-depth understanding of Agile planning and estimating topics that are commonly a source of struggle and frustration within project teams.

#### Project Portfolio Management Using Agile

This course is for experienced project managers and is designed to teach you them to apply Agile, Lean and Kanban to portfolio planning and management.
